LEGISLATION UPDATE

No. 5/2007 (LU07-05)

22 June 2007

EXPLANATORY NOTES TO ASSIST IN INTERPRETING COAL MINE HEALTH AND SAFETY REGULATION 2006

Provision of electrical and mechanical safeguards with appropriate safety integrity

Clause 13 Additional components of health and safety management system (1)

. . .

(e) an electrical engineering management plan covering the life cycle of electrical plant and installations, and electrical engineering practices, at the coal operation, that is developed, implemented and periodically reviewed through consultation with a qualified electrical engineer, to control risks as follows:

. . .

- (iv) to prevent unintended operation of plant,
- (v) to provide electrical safeguards for electrical and non-electrical hazards, with a probability of failure appropriate to the degree of risk posed by the hazard,
- (f) a mechanical engineering management plan covering the life cycle of mechanical plant and installations, and mechanical engineering practices, at the coal operation, that is developed, implemented and periodically reviewed through consultation with a qualified mechanical engineer, to control risks as follows:

. . .

(iii) to provide safeguards to prevent the release of uncontrolled mechanical energy and to prevent unintended operation of mechanical plant,

. . .

(viii) to provide safeguards for mechanical plant and installations, with a probability of failure appropriate to the degree of risk posed by any mechanical plant or installation,

Clarifying points:

The intent of these provisions is that:

- electrical and mechanical control systems are designed in accordance with established functional safety and machinery safeguarding concepts. Refer: AS 61508, AS 62061 and AS 4024
- electrical and mechanical safeguards are to have the appropriate safety integrity as defined in AS 61508, or category as defined in AS 4024.
